

iDOL 63 Cloud Gateway

- Simplify data collection

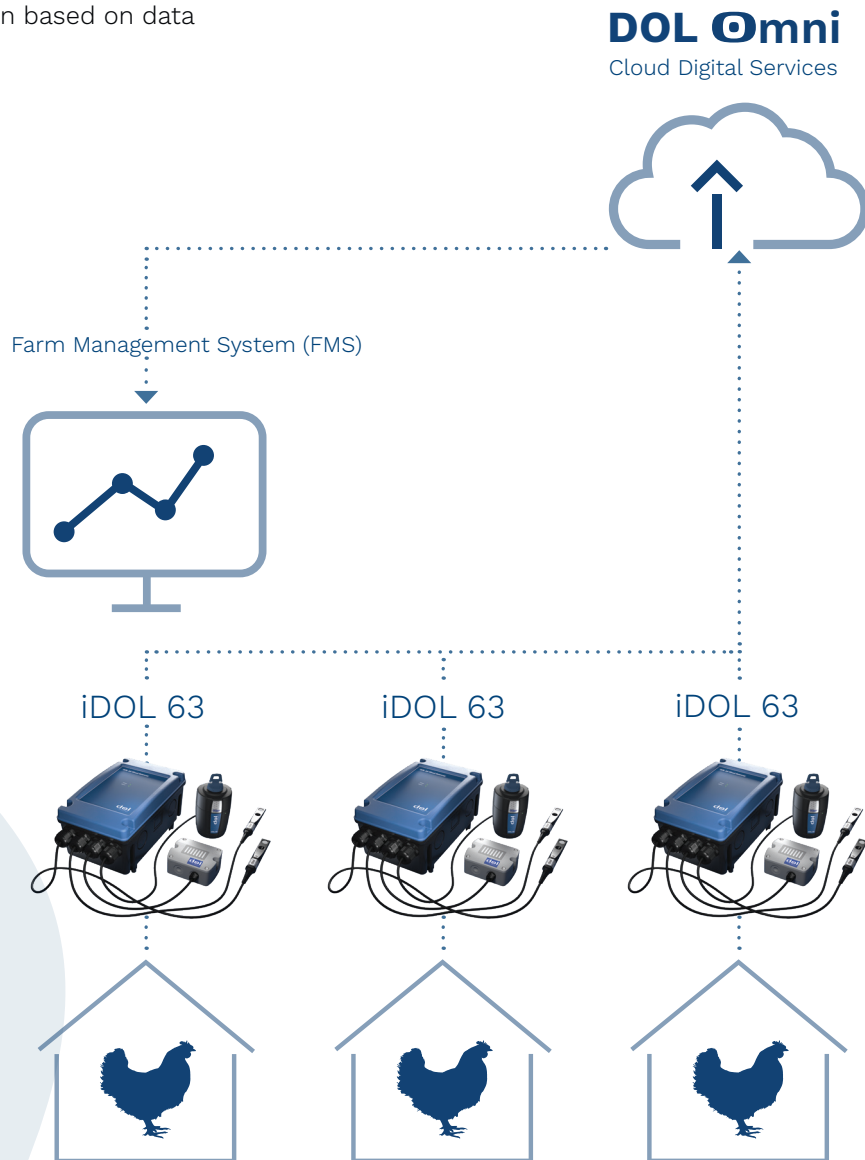

MANAGEMENT

iDOL 63 Cloud Gateway

Wouldn't it be nice to have access to all climate data in one Farm Management System (FMS)? With the DOL Omni digital services, you can now easily monitor and collect data from multiple houses into your Farm Management System.

Today, a common challenge to farmers and Integrators around the world is the ability to:

- aggregate data from multiple livestock houses
- use and benchmark data across livestock houses
- optimize production based on data

DOL Omni

DOL Omni is the world's first platform independent digital service that can be integrated with any farm management system. To this, we are introducing, iDOL 63 Cloud Gateway. Equipped with our sensors, the device collects and provides real-time data from all your livestock houses into your preferred Farm Management System (FMS).

Imagine a farm with three houses where only the first 2 houses are equipped with sensors and climate controllers from the same vendor. This vendor may also supply the Farm Management System for monitoring climate in these houses. The third house is equipped differently, making it difficult to retrieve and view data from this house in the same Farm Management System.

An easy way to overcome this, is by:

- simply connecting iDOL 63 Cloud Gateway
- installing the necessary set of sensors
- subscribing to the digital services through your Farm Management System provider

Simplify your data collection in one Farm Management System by calling your local Dol-Sensors dealer or Farm Management System provider and explain your needs.

This way you can:

- Manage multiple houses
- Single point of access to your data
- Benchmark
- Explore data patterns
- Simplify data collection
- Manage FMS integration
