

Bulk water meter

WPD (type Woltman parallel, DN 50 - DN 150)

WPHD (type Woltman parallel, DN 200 - DN 300)

WSD (type Woltman perpendicular DN 50 - DN 200)

ZENNER

WPD / WPHD Bulk water meter

- WPD (DN 50 - 150), WPHD (DN 200 - 300)
- Replacable metrological unit
(according to european MID)
- Prepared for remote meter reading

Product characteristics

- Replacable metrological unit
(according to european MID)
- Flood-proof (IP68) hermetically sealed
glass/copper register
- Low starting flow, high overload security
- Wide measuring range, small pressure loss
- Hydraulic bearing relieve
- Long-term measuring stability
- Swirl-reducing inlet
- No straight inlet or outlet needed (U0/D0)
according to OIML R49 and DIN EN 14154
- Materials and coating approved in accordance
with KTW / W 270
- Optional WS overall length for DN 50, DN 65,
DN 80 and DN 100 available
- Optional ISO length for DN 50, DN 80 and
DN 100 available
- Approved in accordance with MID and OIML

WPD / WPHD

Woltman meter with parallel turbine shaft

The ZENNER Bulk water meter WPD / WPHD is specially constructed for the measuring of high flow rates with a mainly constant flow rate profile. Due to the robust design, WPD / WPHD can cover a wide measuring range and provide accurate measuring results over a long period. So it covers almost all measuring tasks in the drinking water supply and distribution.

The housing of the WPD / WPHD was flow-optimized. The measuring insert was newly constructed as a replaceable metrological unit according to european MID. In combination with an up-to-date bearing of the impeller a good linearity and long-term stability of the error curve can be achieved. The robust copper-glass-register is non-diffusive and protected against condensation. It also works reliably under the hardest conditions (e.g. in flooded pits or shafts).

Applications

- For the measuring of high flow rates
- For horizontal or vertical installation
- For cold water up to 50° C

AMR options

- Retrofittable with up to two reed-sensors
- Retrofittable with stationary GSM system
- Serially equipped with communication interface for:
 - Electronic pulser
 - Wired M-bus
 - Radio via Wireless M-Bus according to OMS
(Open Metering System)
 - Radio via LPWAN (LoRaWAN™, SIGFOX)

DN 150 - 300

AMR Options

All Woltman meters are equipped with the ZENNER 6-digit-rollers register with modulator disc. Combined with the ZENNER EDC communication module the modulator disc enables a non-reactive scanning for remote meter reading via radio (wireless M-Bus according to OMS), M-Bus or LPWA-networks in the Internet of Things.

The Woltman meters WPD / WPHD and WSD are prepared for the installation of EDC communication modules as a standard. The EDC communication modules are designed for outdoor use and can be retrofitted at any time.

In addition the meters are retrofittable with up to two reed-pulsers. This enables the integration in an M-Bus system or the connection of a GSM datalogger.

Interface for up to

two mechanical reed pulser:

■ Integration into an M-bus-system

Learn more about M-Bus: www.zenner.com/bus-systems.html

■ Connection of a GSM datalogger

- Leak detection
- remote readout via GSM
- Pipe burst
- Error detection

Learn more about GSM: www.zenner.com/gsm.html

Communication interface for EDC modules for electronic pulser, M-Bus or radio

Water meters with EDC-modules provide the following smart metering functions:

- Self-monitoring
- Tampering detection
- Dismounting of module and meter detection
- Reverse water flow detection
- Leakage detection
- Meter Stop detection
- Meter oversized detection
- Meter undersized respectively pipe burst detection

Walk-by / Drive-by Radio System OPERA

- Wireless M-Bus radio technology according to OMS
- Unidirectional radio technology according to EN 13757-4 and OMS specification
- Compatible with several third-party software systems
- Frequency: 868MHz
- Power: 25mW at 868 MHz
- Operating time up to 15 years

Learn more about wireless M-Bus:

www.zenner.com/opera.html

Stationary Radio System (Internet of Things)

- Bidirectional LPWAN radio technology (Low Power Wide Area Network)
- Integration of meters into the Internet of Things (IoT)
- Use of the international LoRaWAN™- standard
- Use of the international SIGFOX- standard

Learn more about Internet of Things: www.zenner.com/iot.html

WSD

Woltman meter with perpendicular turbine shafts

The impeller axis of the WSD is aligned perpendicular to the tube axis. Due to the minimal friction, extremely low starting values can be achieved. Thanks to its design advantages, the Woltmann meter type WSD is an ideal choice especially with fluctuating flow rates and different pressure conditions.

The hydrodynamic optimized impeller is driven reliably even at low flow rates. Also under the highest loads it has enough reserve to detect even flow rate peaks. The specially enhanced bearing of the impeller causes low friction and guarantees a long service lifetime of the meter. The robust copper-glass-register is non-diffusive and protected against condensation. It also works reliably under the hardest conditions (e.g. in flooded pits or shafts).

AMR options

- Retrofittable with up to two reed-sensors
- Retrofittable with stationary GSM system
- Serially equipped with communication interface for:
 - Electronic pulser
 - Wired M-bus
 - Radio via Wireless M-Bus according to OMS (Open Metering System)
 - Radio via LPWAN (LoRaWAN™, SIGFOX)

WSD Bulk water meter

- type Woltman perpendicular
- Replacable metrological unit (according to european MID)
- Prepared for remote meter reading

Product characteristics

- Replacable metrological unit (according to european MID)
- Flood-proof (IP68) hermetically
- sealed glass/copper register"
- Low starting flow, high overload security
- Hydraulic bearing relieve
- Long-term measuring stability
- Swirl-reducing inlet
- No straight inlet or outlet needed (U0/D0) according to OIML R49 and DIN EN 14154
- Materials and coating approved in accordance with KTW / W 270
- Optional WP overall length for DN 50, DN 80 and DN 100 available
- Optional ISO length for DN 50, DN 80 and DN 100 available
- Approved in accordance with MID and OIML

Applications

- For the measuring of fluctuating flow rates
- For horizontal installation
- For cold water up to 50° C

SMART METERS NOW GOING ONLINE

Stationary LPWAN wireless system

For remote wireless reading via the Internet of Things

The new ZENNER communication modules turn the integration of water meters, heat meters, heat cost allocators and other measurement devices with wireless functionality into the Internet of Things into reality. By using LPWAN (Low Power Wide Area Network) technology and the internationally established communication standards LoRaWAN™ and SIGFOX meters can now be read more frequently, more quickly and more efficiently. This allows the efficient and extensive fixed-network reading of consumption measurement devices – with maximum flexibility and minimum effort.
